EXTERIOR NEW WALL CONSTRUCTION

Design and Application Instructions

Staggered Butt Coursing

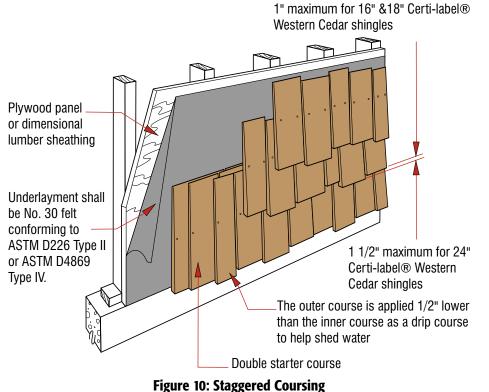

For single course application, an attractive effect can be made by staggering the butt of the Certi-label® Western Cedar shingle from the horizontal line. Apply the Certi-label® Western Cedar shingle irregularly at variable distances below (but not above) the horizontal line.

Staggered butt applications are made by shortening the exposure less than the greater maximum exposure. No Certi-label® Western Cedar shingles or shakes shall be applied greater than the maximum exposure allowed. Check with your local building code official for approval of the staggered butt coursing installation method.

Ribbon Coursing

approximately 1" above the

coursing (Figure 11).

Note: Butt nail all double coursed Certi-label® Western Cedar Sidewall shingles that are exposed more than their maximum single course exposure.

Plywood panel A double shadow line effect can be or dimensional lumber sheathing obtained by raising the outer course Certi-label® Western Cedar shingles undercoursing. Use Number 1 Grade Certi-label® Western Cedar shingles for undercoursing when applying ribbon Underlayment shall be No. 30 felt Apply nails in straight conforming to line approximately 2" ASTM D226 Type II above shingle butts or ASTM D4869 Finished course Type IV. Double starter course The outer course is applied 1/2" lower than the inner course as a drip course to help shed water
